

SATISFY YOUR NEED FOR SPEED.

POWEREXPRESS® AND WILSON EXPRESS CLAMP® DIE HOLDERS

Wilson Tool now offers press brake fabricators two innovative methods to dramatically speed setups. Both the PowerExpress and Wilson Express Clamp die holders eliminate the need for set screws and allow users to change dies in moments.

Push Button Die Clamping.

The automated PowerExpress hydraulic die clamp offers one touch clamping for American-style press brakes. Once the die is loaded, the press operator simply presses a button to securely and accurately clamp the die in place. Another press of the button unclamps the die for rapid changeouts.

PowerExpress die clamps come in two-foot modular sections for easy handling by a single press brake operator. Together with Wilson's PowerExpress upper beam clamp, the die clamp provides a complete hydraulic clamping system for leaner, more productive bending.

One Step Mechanical Die Clamping.

The Wilson Express Clamp die holder is the mechanical alternative for instant die clamping, locking press brake dies in place with the pull of a lever. The Wilson Express Clamp die holder is compatible with virtually any make or model of American style press brake.

Nitrex® Surface Enhancement Increases Clamp Life.

Both the PowerExpress and Wilson Express Clamp die holder are treated with Wilson Tool's exclusive Nitrex high endurance surface enhancement. Wilson's patented process provides a surface hardness of HRC-70, increasing long-term durability and minimizing galling. In even the toughest bending situations, Nitrex will extend the life of your die clamps by several times that of untreated beams.

Maximize Your Press Brake Productivity with Die Clamps from Wilson Tool.

Get your press brake up to speed with the PowerExpress or Wilson Express Clamp die holder. For more information, call 1.800.445.4518 or visit www.wilsontool.com today.
