

POWEREXPRESS™
PATENT PENDING

**Introducing the lightning fast
PowerExpress™ hydraulic
clamping system -**

Immediate seating available.

Strength. Performance. Innovation.

**It's time to get your
press brake up to speed.**

Clamps and Seats in One Easy Step

PowerExpress™ is a revolutionary new hydraulic clamping system designed by Wilson Tool engineers to maximize your press brake productivity. Our unique hydraulic system makes tool changes faster than ever before by enabling operators to clamp and seat tooling in a single operation. One touch pendant control activates the hydraulic clamping action, which automatically seats and clamps tools in a matter of seconds.

Compatible with Virtually Any American Style Tooling

PowerExpress is uniquely designed to accommodate virtually any American style press brake tooling. There's no groove to worry about. Simply load each tooling segment, push the button and your tooling is clamped

and seated with unparalleled accuracy along the full length of the beam.

Modular Design Makes Installation a Snap

Designed with the operator in mind, the PowerExpress system is available in two-

foot modular sections. This modular design enables quick and easy installation and accommodates any length tooling. Unlike other clamping systems, which require several operators to move and install the beams in a matter of hours, a single experienced operator can install the PowerExpress clamping system in less than an hour.

Advanced Hydraulics Provide Long-Term Reliability

With an advanced hydraulic system designed specifically to provide long-term problem-free operation, the PowerExpress system is far less susceptible to failure than systems utilizing hydraulic bladders. Should an unlikely problem occur, unlike its bladder counterparts, the PowerExpress system's modular design enables it to continue operating after the damaged section is removed for maintenance, significantly reducing downtime.

Increased Bending Capability

Since the PowerExpress clamping system is more streamlined, more clearance area is created for bending. 30 degree bends — in both front and back of the beam — are no problem.

Nitrex Surface Enhancement Increases Clamp Life

Every PowerExpress clamping system is treated with Wilson Tool's exclusive Nitrex™ high endurance surface enhancement. Wilson's patented process provides a surface hardness of HRC-70, increasing long-term durability and minimizing galling. In even the toughest bending situations, Nitrex will extend the life of your PowerExpress system by several times that of untreated beams.

Maximize Your Press Brake Productivity with PowerExpress

Get your press brake up to speed with the PowerExpress hydraulic clamping system. For more information, call 1.800.445.4518 or visit www.wilsontool.com/powerexpress.

Strength. Performance. Innovation.

PRECISION TOOLING. UNBEATABLE PERFORMANCE.

For more than 40 years, Wilson Tool International® has provided industry-leading tooling solutions that enhance the performance of sheet metal fabricators.

The four divisions of Wilson Tool – Punch Press, Press Brake, Impax Tooling Solutions® and Xtra – represent the most comprehensive line of tooling systems and accessories available. Our ability to consistently provide innovative, high quality products that outlast and outperform the competition is why the world's most successful fabricators rely upon Wilson Tool tooling systems.

A knowledgeable global sales force, multilingual customer support staff, same-day shipping and extensive distribution network are just a few of the benefits that keep our customers coming back time and again.
