

DE-BURR PARTS QUICKLY AND EFFICIENTLY

WILSON DE-BURRING TOOL

Available for Trumpf® or thick turret-style punch presses, the Wilson De-burring Tool coins a small chamfer on the cut edge to accurately and efficiently de-burr sharp edges in straight lines or arcs – including acute angles and very small radii.

Remove costly secondary de-burring operations

Using your punch press to de-burr parts eliminates the need for a separate de-burring step in your fabrication process, greatly increasing productivity and reducing production time.

Durable, easy to use ball assemblies save time, extend life

Wilson Tool's unique design enables operators to adjust the ball pressure without disassembling the tool, saving setup and adjustment time. In addition the ball assemblies are designed for extended tool life on a wide range of sheet materials.

Feature summary

- Fast, efficient de-burring tool eliminates costly secondary operation
- De-burrs straight lines or arcs, including acute angles and very small radii
- Unique ball assembly saves time and extends tool life
- For use in materials .8mm to 5mm thick
- Can be used to de-burr nested parts

For more information on the Wilson Tool De-Burring tool, please contact your Wilson Tool Sales Engineer or call 1-800-328-9646.

Description	Cat. No. Trumpf Style	Catalog No. Thick Turret
Complete Tool	26697	13878
Punch Assembly	26698	13879
Die Assembly	26699	13880
Replacement Ball Assembly (1-off)*	26700	26700
