

Trumpf® 2-4-1 Upgrade

New Features - Improved Productivity

To help improve your productivity, Wilson Tool's exclusive 2-4-1 tooling for Trumpf-style machines has been enhanced to include the following:

- Push on urethane stripper
- Magnetic ID pad
- Draw bolt retaining ring
- Ultima premium tool steel standard on all punches

Urethane Stripper

These new urethane strippers offer positive stripping, minimal sheet marking, and less noise than conventional strippers. In addition, each 2-4-1 urethane stripper is machined to match the exact shape of your punch, ensuring that you will be able to hold the tolerances you need.

Magnetic ID Pad:

These unique magnetic ID pads enable you to easily identify your punches. The pads allow you to mark them with whatever punch information you would like or, as an option, we will laser mark the pad with the technical specifications of the punch. Now it is easy to identify the punch you need.

Draw Bolt Retaining Ring

To keep the draw bolt from sliding out of the 2-4-1 holder, we have added a retaining ring that locks the draw bolt and washer in place. This means you do not need to be concerned about draw bolts falling out and getting damaged or lost – they are now locked in place.

Premium Tool Steel Now Standard

To ensure that you will be able to achieve maximum punching performance, we are now making all 2-4-1 punches with our exclusive Ultima tool steel – the toughest, most durable steel available today.

Contact your Wilson Tool Sales Engineer for more information on the Trumpf 2-4-1 upgrades, or call 800-328-9646.

Strength. Performance. Innovation.
