## WILSON TOOL CARTS

### The Wilson Tool Carts

In order to help fabricators increase productivity and improve performance, Wilson Tool offers tooling storage solutions designed to store a large number of punches, dies and strippers in a relatively small space. With their heavy duty construction, these carts will stand up to the harshest work environments. Wilson Tool carts also offer a flexible selection of standard components and cost effective custom configurations that allow you to customize your environment to meet your specific needs.

- Heavy duty 14 gauge construction
- Powder coated paint for durability
- 700 pound casters (2800 total capacity per cart)
- Shelves adjustable to 1" increments
- Tooling is highly visible and easy to retrieve
- Open storage for easy identification
- Configured for set-up, mobile crib, and stationary crib applications

### Lean Tip: Get in the Zone

Work is handled most efficiently when kept within areas defined as primary reach zones. These are the horizontal and vertical areas that a worker can reach with minimal arm, head, or trunk movement. Moving away from these primary zones requires more movement, and ultimately more time. Wilson Tool's tool carts enable operators to better stay within their reach zone, resulting in greater efficiency and higher productivity.
