

“THE QUALITY OF THE WILSON AMERICAN PRECISION PRESS BRAKE TOOLING IS OUTSTANDING.”

“We decided on Wilson Tool’s American Precision™ press brake tooling for its accuracy. We were hoping to reduce the number of setup parts we create for each part number and it has exceeded our expectations. The tools are showing very little wear and the dimensional accuracy is much better than any other dies we have. We also like the flexibility of the sectional tooling. The press brake operators like it because they no longer need to search for the right length of tooling, and it’s lighter and easier to load than traditional tooling.”

Wilson American Precision incorporates the best of “Quick Change” European style tooling for a one-of-a-kind design that’s faster and more versatile than any other American style press brake

tooling available today. One touch tool changes, stage bending and unmatched durability combine to make Wilson American Precision the single most innovative press brake tooling on the market.
