

**“IMPAX OFFERS THE  
BEST OPTION”  
AVAILABLE FOR THREAD FORMS TODAY.**

“Three years ago, we switched to Impax thread forms for our heating products. Their custom design concept provides a tight fit that doesn't strip out under high torque levels. Impax thread forms not only make assembly faster, they also smooth product repairs, fitting perfectly for easier screwing and unscrewing. We've been so pleased with Impax thread forms we're using them in our latest launch of residential cooling product top panels to provide our customers with the best repeatable securing method possible.”

Impax thread forms are custom built and test run repeatedly to ensure flawless stamping every time. They offer a better fit and require no extra parts or additional assembly time. And all of our thread form tools are engineered with M4 powdered tool steel for increased strength and durability.
