

“

IMPAX PUNCHES WITH EFFEX™ SURFACE FINISH**LAST LONGER
THAN ANY OTHER PUNCH.”**

“We had applications where we were breaking punches all the time. The press would be down two to three times per night because of the galling on the punches causing them to break. So we tried the Impax punches with Wilson Tool's M4 tool steel and Effex™ surface finish and it lasts longer than any other punch. Now when we run the die we don't have to replace broken punches. We only bring it in for maintenance, sharpen it and send it back into the press room. We're really happy with the results.”

Engineered using the Wilson Tool method of straight line grinding, punches with Effex surface finish reduce

IMPAX
PUNCH SOLUTIONS

Effex surface finish reduce

the susceptibility to wear and breakdown and significantly increase punch life. The longer punch life and unmatched accuracy of Wilson Tool's Effex punches will increase your productivity and improve the quality of your parts. Using the straight line grinding method, Effex finished punches are ground parallel to the direction of the punch, resulting in a smoother punch with less galling.
