

“WILSON HAS 99% OF THE TOOLING WE NEED READILY AVAILABLE ALL THE TIME.”

There are four key reasons we went with the Wilson Tool European Style Press Brake Tooling and have stayed with it. The availability of the tools was one reason. Durability was another. We've got tools we purchased seven years ago that we're still using today. The quick change potential was also important to us. With Wilson's Express Clamping System™ we can snap tooling in and out of the machine very quickly. And finally, the flexibility of Wilson's tooling allows us to make more than 3000 different part numbers with a very small amount of tooling.*

Longer tool life and quick set-ups are what make Wilson Tool European Style Press Brake Tooling

the first choice of fabricators worldwide. Wilson's unique clamping system, state-of-the-art manufacturing and exclusive Nitrex™ surface enhancement gives you better tooling for your money.
